

SmartPhone

Abstract

There are so many different smartphones, from different types of companies. They have all started with apple, but all smartphones have improved to be better, get more high tech and more advanced.

Introduction

A smartphone is a mobile device that has wifi, cellular and a running system. It goes beyond a text message and a phone call, it is videos, games, pictures, email, etc. There are tons of different operating systems in smartphones, from Android OS, IOS, Bada, Blackberry OS, MeeGo OS, and more. Smartphones vary through different companies you would want to use, there are iPhone, Android, and Samsung. There are tons more, but those three are the most popular and most used nowadays. The smartphones hurt and help you, they make contacting so much easier and quicker, since there is texting and calling and video chatting, it makes contacting easier and more helpful for distance calls and close calls. It is small, the smartphones are known to be small, pocket size, you can just fit it into your back pocket and go along with your day. The disadvantage of them though, they have become so popular that teenagers and young kids have become heavily addicted to them and it becomes a problem.

Methodology

Communication with a smartphone is quite easy, from video chat and calling to texting and sending videos and pictures to one another. Early problems were often faced because of being introduced and being new to the operating systems and smartphones. The smartphones and the communication with them are so important because they make everything easier and more accessible with everyone that uses them.
